Introduction

The application discloses a fusion polypeptide comprising a TolAIII domain fused to a non tolA polypeptide and uses thereof.

1. Not all the priority documents were available at the time of the establishment of the International Preliminary Examination Report (IPER) which consequently has been established assuming that all the claims are entitled to the earliest claimed priority. Should, however, the priority be invalid, the Applicant is informed that documents D9 would be detrimental to the novelty and/or inventivity of the claimed subject-matter.

Re Item V

Reasoned statement under Article 35(2) PCT with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Novelty and inventive step (Art. 33(1)-(3) PCT)

- 2. Claims 1-3, 8, 12, 14, 16-19, 22-24, 26-32, 35-36 are not new in view of D2 and/or D1. D2 discloses a fusion polypeptide for expression in a host cell comprising a TolAllI domain and a non-TolA polypeptide, wherein the TolAllI domain is located towards the N-terminus of the fusion polypeptide and the non-TolA polypeptide is located towards the C-terminus of the fusion polypeptide (e.g. page 7, line 26 to page 8, line 8). D2 discloses methods to produce said fusion polypeptide, use of said fusion polypeptide to isolate or to study the interaction property of the non-TolA polypeptide (e.g. page 7-8). D1 discloses a construct having tolAIII domain linked to a C-terminal His tag (e.g. page 353, left column, page 358, right column).
- The claimed subject-matter of claims 4-7, 9-11, 13, 15, 20, 25, 33-34 is not 3. inventive in the light of D1 or D2 in combination with either D3-D5, D7. The features of said claims are merely one of several straightforward possibilities from which the skilled person would select, in accordance with circumstances, without the exercise of inventive skill, in order to solve the problem posed. It should be also noted that changing the position of the TolA and non-TolA parts is an obvious alternative.
